

Evergreen Medication Management Program

Are you....

...worried about your loved one taking medications properly?

...troubled that your parent doesn't understand what the medications are for?

...concerned your loved one is taking more medication than prescribed?

...apprehensive about your spouse experiencing multiple medication side effects?

Do you worry that your parent is forgetting to take medications?

If you answered "yes" to these questions, your loved one will benefit from the quality care provided by a registered nurse with the **Evergreen Commons Medication Management Program**.

A registered nurse will be sent to your home to:

- Set up medications for one week in an organized pill dispenser.
- Instruct your loved one on the therapeutic action of the medication, dosage, frequency and potential side effects.
- Monitor their compliance to medication administration.
- Call in prescription refills to the pharmacy.
- Notify family members if their loved one is not taking medication as prescribed.

"I feel so comfortable knowing that my mother is having her medications set up weekly by the nurse. And if she does not take her medications properly, I will be notified."
